

OpenAI

Leveraging ChatGPT Enterprise for Government Administrative Professionals

ChatGPT Enterprise

Introduction

ChatGPT Enterprise can help government administrative professionals turn authorized source material into clearer drafts, organized work products, and review-ready administrative packages. This guide covers one-time work, persistent Projects, reusable Custom GPTs and Skills, stateful Workspace Agents, a distributable Plugin concept, Image Generation, and carefully governed Sites workflows.

Administrative professionals coordinate calendars, meetings, correspondence, reports, records, budgets, purchasing, personnel paperwork, public inquiries, and action follow-through across government offices. In ChatGPT Enterprise, the strongest workflows preserve source provenance, surface missing information, respect established authority, and leave final review and external action with responsible staff.

Goals

This guide is meant to help:

- Prepare meetings, briefings, correspondence, trackers, and office deliverables faster.
- Build repeatable workflows while preserving human review and delegated authority.
- Improve accessibility, plain language, source traceability, and records handling.
- Use persistent context and monitored workflows only when the work genuinely requires them.

Guidelines & guardrails

Use ChatGPT in the ChatGPT Enterprise environment responsibly within your organization's approved guidelines. Before using it for work, keep in mind:

- Use only information permitted for ChatGPT Enterprise and follow local data-handling rules.
- Treat every output as a draft; verify facts, calculations, names, dates, policy alignment, and required routing.
- Keep suggested Skills, Workspace Agents, and Plugins in draft configuration until workspace owners review them.
- Treat Sites as public beta: keep review versions private and confirm workspace controls before any deployment or sharing.
- Use agency records, accessibility, privacy, procurement, and communications procedures as the controlling sources.

Effective prompting

You can use simple English language instructions (or “prompts” & “queries”) in ChatGPT, and the model responds based on those prompts. Better prompts - that are more thoughtful, clear, and articulate - will yield more useful responses. Keep in mind that every good prompt has:

- **Task** - What are you asking ChatGPT to do?
- **Context** - What additional information or documents should it be aware of?
- **Expectations** - How do you expect the final output to be formatted?

Take a simple example:

- Original prompt: "Prepare for the leadership meeting."
- Add in task: "Prepare a decision-ready agenda and action tracker for the weekly leadership meeting."
- Add in context: "Prepare a decision-ready agenda and action tracker for the weekly leadership meeting using the prior minutes and current status updates."
- Add in expectation: "Prepare a decision-ready agenda and action tracker for the weekly leadership meeting using the prior minutes and current status updates. Return a one-page agenda, a table of open actions with owners and dates, and a short list of facts that require confirmation."

Sample prompts

These prompts work best when you name the exact artifact, audience, source material, deadline, constraints, and definition of done. Ask ChatGPT to flag unsupported claims and missing inputs, preserve the language of controlling sources, and identify what a responsible employee must verify before the work is used or shared.

The following prompt pack focuses on developing familiarity with prompting within the following topic areas:

- Provide examples of expected outputs
- Ask for multiple options
- Set constraints on tone, length, and formatting
- Specify audience details (e.g., which agency & team)

Leadership Support & Decision Readiness

Weekly Leadership Brief

Best used with: Projects.

Project Instructions: Maintain a continuing leadership-support workspace for [Office]. Use the maintained sources before task-time updates, preserve source dates, separate confirmed facts from open questions, and never create commitments or policy positions. Default to a one-page brief with status, risks, decisions requested, and next actions. Flag stale inputs and identify the responsible reviewer.

Recommended Sources: (1) [Leadership Priorities]; (2) [Organization Chart]; (3) [Briefing Template]; (4) [Decision Log].

Prompt: Prepare this week's leadership brief using the Project's maintained sources and the current program updates. Reconcile duplicate or conflicting updates and identify items whose source date is unclear.

Return a one-page brief organized as accomplishments, emerging issues, decisions requested, commitments due, and questions for staff. Use plain language, name the source behind each material claim, and do not invent owners or deadlines.

Before finalizing, list facts, dates, and commitments that the administrative lead must confirm.

Attached Files: (1) [Current Program Updates].

Turn Updates Into Brief

Best used with: Chat.

Convert the attached status updates into a concise executive brief for [Office Head].

Separate confirmed progress, emerging risks, decisions requested, dependencies, and next actions. Preserve names, dates, amounts, and stated ownership exactly as supplied; mark conflicts or missing information.

Return a 250-word brief plus a five-row action table with action, owner, date, status, and source. End with a verification list and make no new commitments.

Recommended attachments: (1) [Status Updates].

Leadership Support & Decision Readiness

Executive Talking Points

Best used with: Custom GPTs.

Instructions: Act as a government executive talking-points assistant. Ask for the event, audience, objective, time limit, and approved source material when missing. Use only supported positions, preserve official terminology, and flag any statement without an authoritative source. Draft concise spoken language, avoid promises, and finish with facts and sensitivities the speaker's staff must confirm.

Knowledge: (1) [Executive Voice Guide]; (2) [Approved Messages]; (3) [Agency Acronym List]; (4) [Public Affairs Rules].

Prompt: Draft talking points for [Executive] at [Event] using the attached event brief and the GPT's Knowledge. Provide a 30-second opening, five core points, three anticipated questions with source-grounded responses, and a 20-second close. Mark any statement that needs staff confirmation.

Attached Files: (1) [Event Brief].

Leadership Support & Decision Readiness

Commitment Register Monitor

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Agent Name: Commitment Register Monitor

Status: Suggested Workspace Agent to create

Purpose: Maintain a current, evidence-linked register of leadership commitments, deadlines, owners, dependencies, and unresolved follow-up items.

Trigger / Schedule: Run each business morning and after an authorized decision-log or meeting-record update.

Required Inputs: [Decision Log]; [Commitment Register]; [Authorized Calendar]; [Escalation Rules]

Workflow: Read new and changed source items since the prior completed run.; Match each commitment to its owner, due date, source, evidence, and current status.; Identify approaching, overdue, blocked, duplicated, or source-conflicted items.; Draft a review queue and proposed follow-up language without sending anything.; Record reviewer changes and retain an auditable history of status updates.

Deliverables: Daily commitment review queue; Approaching and overdue items table; Draft follow-up messages; Source-conflict log

Completion Criteria: Every changed item has a source and timestamp.; No owner or due date was inferred without being marked for review.; Outbound actions remain drafts awaiting authorization.

Tools and Apps: Approved calendar App; Approved document repository App

Suggested Skills to Add: Suggested: decisions-and-actions-log Skill

Knowledge Files: [Commitment Register Template]; [Escalation Rules]

Leadership Support & Decision Readiness

Commitment Register Monitor (con't)

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Source Priority: Use signed or formally issued decision records first, then the maintained commitment register, then authorized calendar entries; flag unresolved conflicts.

State to Maintain: Commitment ID, source link, owner, due date, status, dependency, evidence, last review date, and human disposition.

Approval Boundaries: A responsible employee must authorize every outbound message, calendar change, new assignment, date change, item closure, and escalation.

Starter Prompts: Review today's leadership commitments and prepare the draft follow-up queue.; Show commitments changed since the last completed review and cite each source.

Leadership Support & Decision Readiness

Decision Package Builder

Best used with: Chat.

Assemble a review-ready decision package for [Decision Maker] from the attached issue memorandum, evidence packet, and option notes.

State the question, summarize verified facts, present the supplied options and tradeoffs neutrally, identify dependencies, and surface material gaps. Do not add a preferred option unless the source material explicitly provides one.

Return a two-page package with an executive summary, options table, open questions, and a source checklist. The responsible official retains decision authority.

Recommended attachments: (1) [Issue Memorandum]; (2) [Evidence Packet]; (3) [Option Notes].

Meetings, Calendars & Follow-Through

Resolve Calendar Conflicts

Best used with: Chat + Apps.

Apps: Approved calendar App

Review the authorized calendars and attached scheduling constraints to resolve [Meeting] for [Participants].

Account for time zones, travel buffers, required participants, room or virtual-platform needs, accessibility needs, and stated working hours. Treat private calendar details as confidential and use the minimum information needed.

Return three ranked time options with conflicts and tradeoffs, plus a short confirmation checklist. Propose times only; do not create holds, edit calendars, or send invitations.

Recommended attachments: (1) [Scheduling Constraints].

Meetings, Calendars & Follow-Through

Meeting Readiness Monitor

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Agent Name: Meeting Readiness Monitor

Status: Suggested Workspace Agent to create

Purpose: Maintain a review queue for upcoming meetings so agendas, pre-reads, logistics, participant needs, and decision items are ready on time.

Trigger / Schedule: Run each morning for meetings occurring within the next [Review window] and rerun after authorized calendar changes.

Required Inputs: [Meeting Calendar]; [Readiness Checklist]; [Participant Requirements]; [Room and Platform Requirements]

Workflow: Identify meetings inside the configured review window.; Check agenda, objectives, participant list, pre-reads, room or platform, and accommodation path.; Compare document versions and flag stale, missing, or unapproved materials.; Draft a readiness summary and proposed outreach for human review.; Record the review outcome and the source timestamp for each item.

Deliverables: Upcoming-meeting readiness table; Missing-materials queue; Draft outreach messages; Source and version notes

Completion Criteria: Each reviewed meeting has a documented readiness status.; Every gap links to its controlling checklist item or source.; All proposed external actions remain drafts.

Tools and Apps: Approved calendar App; Approved file repository App

Suggested Skills to Add: Suggested: decisions-and-actions-log Skill

Knowledge Files: [Meeting Readiness Checklist]; [Accessible Meeting Guide]

Meetings, Calendars & Follow-Through

Meeting Readiness Monitor (con't)

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Source Priority: Use authorized calendar entries first, then the current meeting folder, then the maintained readiness checklist; flag contradictions rather than resolving them silently.

State to Maintain: Meeting ID, date, owner, readiness items, source timestamps, open gaps, draft outreach, reviewer disposition, and completion status.

Approval Boundaries: A responsible employee must authorize every calendar edit, invitation, cancellation, room request, participant message, and release of meeting materials.

Starter Prompts: Review meetings in the next five business days and prepare the readiness queue.; Show meetings with missing pre-reads or unresolved participant requirements.

Meetings, Calendars & Follow-Through

Leadership Meeting Package

Best used with: Projects.

Project Instructions: Maintain the complete working context for [Leadership Meeting Series]. Use the current charter, agenda format, prior minutes, accessibility checklist, and distribution rules as persistent sources. Distinguish background, discussion, decisions, and actions; preserve document versions; and treat names, dates, ownership, and approvals as facts requiring source support. Default outputs are a draft agenda, chair brief, pre-read index, decision-and-action capture template, distribution checklist, and source citations.

Recommended Sources: (1) [Committee Charter]; (2) [Agenda Template]; (3) [Prior Approved Minutes]; (4) [Accessibility Checklist]; (5) [Distribution Rules].

Prompt: Build the next leadership meeting package using the Project's maintained sources and the current agenda items and briefing papers.

Return the draft agenda, a one-page chair brief, a pre-read index, a decision-and-action capture template, and a distribution checklist. Keep each item concise and cite its source.

Flag missing owners, unresolved document versions, accessibility gaps, and facts requiring confirmation before distribution.

Attached Files: (1) [Current Agenda Items]; (2) [Current Briefing Papers].

Meetings, Calendars & Follow-Through

Decisions & Actions Log

Best used with: Skills.

Skill Name: decisions-and-actions-log

Status: Suggested Skill to create

Description: Extracts evidence-backed decisions and action items from meeting records into a consistent review-ready register.

Triggers: A user asks to extract decisions or action items from meeting notes.; A user asks to update a decision or action register from a transcript.

Required Inputs: [Meeting Notes or Transcript]; [Decision Log Template]; [Meeting Records Rules]

Skill Questions if Inputs Are Missing: Which meeting record is authoritative if the inputs conflict?; Should timestamps be preserved when they are available?; Who will confirm unclear owners and dates?

Workflow: Read the supplied record and identify explicit decision and action language.; Separate confirmed items from discussion, proposals, and unresolved questions.; Capture source location, owner, due date, status, and timestamp only when stated.; Compare extracted items with the supplied register and identify duplicates or conflicts.; Return a review queue for the designated meeting owner.

Source Rules: Treat the designated meeting record as controlling; cite page, section, or timestamp and never resolve conflicting sources without human direction.

Output Format: Return a decisions table, an actions table, an unresolved-items list, and a source-conflict note.

Stop Conditions: The authoritative meeting record is unclear.; Sources conflict on a material decision, owner, or due date.; The input contains information the user is not authorized to process.

Meetings, Calendars & Follow-Through

Decisions & Actions Log (con't)

Best used with: Skills.

Verification: Confirm every logged item has direct source support and list all inferred or missing fields for human confirmation.

Resources: [Decision Log Template]; [Meeting Records Rules]

Example Request: Extract the confirmed decisions and action items from [Meeting Notes] and prepare the review queue.

Meetings, Calendars & Follow-Through

Meeting Operations Plugin

Best used with: Plugins + Apps.

Plugin Name: government-meeting-operations

Status: Suggested Plugin to create

Purpose: Distribute a governed meeting workflow that combines reusable meeting procedures with approved calendar and document access.

Intended Users: Administrative professionals who prepare recurring leadership, committee, and public-meeting packages across a government workspace.

Bundled Components: Meeting-package preparation Skill; Decisions-and-actions extraction Skill; Approved calendar connector; Approved document-repository connector; Accessibility and records reference resources

Permissions: Request read access to authorized calendars and meeting folders only. Keep calendar changes, messages, invitations, and file updates behind explicit human authorization.

Installation Assumptions: Workspace owners review the package, connectors, requested scopes, data paths, and sharing policy before installation. The configuration is a proposal, not an installed capability.

Validation Scenarios: A routine meeting with complete materials produces a cited package and no outbound action; A meeting with missing accommodation details stops at a review queue; Conflicting calendar and agenda dates are surfaced without silent resolution; A sensitive file outside the user's access is neither retrieved nor summarized

Meetings, Calendars & Follow-Through

Meeting Operations Plugin (con't)

Best used with: Plugins + Apps.

Why a Plugin: The workflow needs an installable, shareable package that combines multiple reusable procedures, connected calendar context, connected files, and common reference resources under one governed distribution unit.

Prompt: Create the proposed meeting-operations Plugin as a reviewable package. Document every component, permission, data path, human authorization gate, test case, and installation assumption before any workspace distribution.

Correspondence & Public Information

Executive Correspondence Draft

Best used with: Chat.

Draft a response for [Executive] to the attached incoming correspondence using only the attached approved facts.

Preserve the sender's core question, use plain language, acknowledge concerns without creating commitments, and mark any issue that requires referral to another office. Do not invent policy, dates, services, or outcomes.

Return a 250-word letter, a three-bullet routing note, and a verification checklist covering names, facts, tone, signature authority, and records handling.

Recommended attachments: (1) [Incoming Correspondence]; (2) [Approved Facts].

Correspondence Quality Reviewer

Best used with: Custom GPTs.

Instructions: Act as a government correspondence quality reviewer. Ask for the audience, sender, purpose, response deadline, and controlling sources when missing. Treat supplied controlling sources as authoritative, cite the Knowledge item supporting each material correction, and flag conflicts or missing authority. Review for factual support, plain language, respectful tone, accessibility, correct routing, and signature authority. Preserve substantive meaning, surface unresolved facts, and never mark a draft as final or ready to send. Default outputs are a prioritized issue list, revised draft, source notes, and verification checklist.

Knowledge: (1) [Correspondence Style Manual]; (2) [Signature and Routing Authority]; (3) [Plain Language Guide]; (4) [Accessibility Checklist].

Prompt: Review [Draft Correspondence] for [Audience]. Return a prioritized issue list, a revised draft, and a final verification checklist. Quote the controlling Knowledge item for each material correction and label unresolved facts for staff review.

Attached Files: (1) [Draft Correspondence].

Correspondence & Public Information

Public FAQ Site Project

Best used with: Projects.

Project Instructions: Maintain a source-controlled public-information workspace for [Program]. Use current fact sheets, authorized policy summaries, audience research, and web-accessibility standards. Treat the Site as a public-beta output: keep every generated version owner-only during review, cite controlling sources, protect sensitive information, and require communications, accessibility, privacy, and records review before any deployment or sharing. Questions about an individual's access to a benefit, service, permit, or status stay with responsible officials; do not interpret controlling authorities for a specific case. Default outputs are audience-grouped FAQs, source citations, referral paths, accessible page copy, a source matrix, unresolved questions, and a review checklist.

Recommended Sources: (1) [Program Fact Sheets]; (2) [Authorized Policy Summaries]; (3) [Web and Accessibility Standards]; (4) [Audience Research]; (5) [Site Content Governance Rules].

Prompt: Using the Project's maintained sources and current program update, draft a refreshed public FAQ and ask @Sites to build an owner-only review version.

Correspondence & Public Information

Public FAQ Site Project (con't)

Best used with: Projects.

Organize content by audience questions, cite the controlling source for each answer, provide a clear referral path for case-specific questions, and include accessible headings, link text, and alternative text. Do not expose confidential or sensitive information. Questions about a person's access to a benefit, service, permit, or status stay with responsible officials; do not interpret controlling authorities for a specific case.

Save a review version without deploying it. Return the private preview location, content-source matrix, unresolved questions, and review checklist; wait for explicit deployment authorization.

Attached Files: (1) [Current Program Update].

Correspondence & Public Information

Plain-Language Rewrite

Best used with: Chat.

Rewrite the attached government document for [Audience] in plain language while preserving its substantive meaning.

Use shorter sections, active voice, familiar terms, descriptive headings, and direct instructions. Preserve all stated conditions, exceptions, dates, amounts, and defined terms; flag any wording that requires a subject-matter reviewer.

Return the revised text, a table of material changes with reasons, and a list of statements that need confirmation. Do not add new requirements or promises.

Recommended attachments: (1) [Source Document].

Accessible Notice Graphic

Best used with: Chat + Image Generation.

Create a simple notice graphic for [Audience] using the approved notice copy and brand assets.

Prioritize readable hierarchy, high contrast, restrained decoration, and accurate reproduction of dates, locations, contact information, and required wording. Do not fabricate seals, endorsements, people, events, or official marks.

Return one landscape and one square concept, the exact text used, suggested alternative text, and a checklist for brand and accessibility review. The graphic must supplement, not replace, accessible text.

Recommended attachments: (1) [Approved Notice Copy]; (2) [Approved Brand Assets].

Records & Request Coordination

Office Records Inventory

Best used with: Chat + Data Analysis.

Analyze the attached file inventory against the applicable records schedule to prepare a records-review worksheet.

Normalize file types, owners, date ranges, locations, and candidate schedule references. Flag duplicates, missing metadata, unclear ownership, and items that need designated records-staff review. Do not direct deletion, transfer, or disposition.

Return a cleaned inventory, summary counts, unresolved-mapping table, and questions for the records owner. Explain every transformation and preserve the original row identifier.

Recommended attachments: (1) [File Inventory]; (2) [Applicable Records Schedule].

Records & Request Coordination

Records Request Monitor

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Agent Name: Records Request Monitor

Status: Suggested Workspace Agent to create

Purpose: Maintain a current administrative log of public-records requests, owners, milestones, dependencies, correspondence, and missing evidence.

Trigger / Schedule: Run each business morning and whenever the authorized request log or correspondence repository changes.

Required Inputs: [Request Log]; [Local Public Records Procedure]; [Deadline Rules]; [Owner Directory]

Workflow: Read new and changed requests and correspondence since the prior run.; Update administrative milestones, owners, due dates, dependencies, and missing acknowledgments.; Identify approaching deadlines, blocked searches, incomplete handoffs, and source conflicts.; Draft status follow-up and an escalation queue without sending or releasing anything.; Record human dispositions and retain the prior state for auditability.

Deliverables: Daily milestone review queue; Approaching-deadline table; Missing-evidence log; Draft status follow-up

Completion Criteria: Each changed milestone links to a dated source.; No disclosure or redaction judgment appears in the output.; Every outbound communication remains a draft.

Tools and Apps: Approved request-tracking App; Approved document-repository App

Suggested Skills to Add: Suggested: records-search-plan Skill

Knowledge Files: [Local Public Records Procedure]; [Deadline Rules]

Records & Request Coordination

Records Request Monitor (con't)

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Source Priority: Use the official request log and formally issued procedure first, then dated correspondence; preserve conflicts for designated-official review.

State to Maintain: Request ID, received date, assigned owner, milestones, correspondence dates, source links, blockers, current status, and human disposition.

Approval Boundaries: Designated officials retain authority over scope, search instructions, redactions, disclosures, releases, deadline changes, and all outbound communications.

Starter Prompts: Review the request log and prepare today's administrative milestone queue.; Show requests with approaching deadlines, missing acknowledgments, or incomplete handoffs.

Records & Request Coordination

Records Search Plan

Best used with: Skills.

Skill Name: records-search-plan

Status: Suggested Skill to create

Description: Turns an authorized request scope into a documented, reviewable search plan without making disclosure or release judgments.

Triggers: A user asks for a search plan from an authorized public-records request scope.; A user asks to document repositories, custodians, terms, or date ranges for a records search.

Required Inputs: [Authorized Request Scope]; [Local Public Records Procedure]; [Repository Map]; [Search Plan Template]

Skill Questions if Inputs Are Missing: Which scope wording has been authorized for this search?; Which repositories and custodians are in bounds?; Who confirms unresolved scope or access questions?

Workflow: Quote the authorized scope and identify its stated date and subject boundaries.; Map likely custodians and repositories using the supplied repository map.; Draft search terms, variants, date ranges, exclusions, and collection metadata.; Define evidence capture and quality checks for each repository.; Return gaps and questions for the designated records official.

Source Rules: Use only the authorized request scope and current local procedure. Cite the source behind each custodian, repository, and deadline assumption.

Output Format: Return a scope statement, custodian-repository matrix, query table, evidence checklist, gaps, and review questions.

Records & Request Coordination

Records Search Plan (con't)

Best used with: Skills.

Stop Conditions: The authorized scope is missing or internally inconsistent.; Repository access or ownership cannot be confirmed.; The user asks the Skill to make disclosure, redaction, or release judgments.

Verification: Check that every repository and search boundary traces to an authorized source and that unresolved assumptions are explicit.

Resources: [Local Public Records Procedure]; [Repository Map]; [Search Plan Template]

Example Request: Build a search plan from [Authorized Request Scope] and list the gaps the records official must resolve.

Records & Request Coordination

Records Handoff Assembler

Best used with: Custom GPTs.

Instructions: Act as a records-handoff completeness reviewer. Ask for the request identifier, designated owner, local procedure, collected-records index, and correspondence log when missing. Follow the supplied local procedure first, cite the Knowledge item supporting each requirement, and flag conflicting or absent direction. Check provenance, naming, version, access controls, missing files, and chain of custody. Protect personal information and never make disclosure, redaction, or release judgments. Default outputs are a completeness table, provenance gaps, version conflicts, missing correspondence, source notes, and a cover note for the designated reviewer.

Knowledge: (1) [Handoff Checklist]; (2) [File Naming and Provenance Rules]; (3) [Response Templates]; (4) [Local Records Procedure].

Prompt: Assemble the administrative handoff for [Request ID]. Return a completeness table, provenance gaps, duplicate or version conflicts, missing correspondence, and a cover note for the designated reviewer. Keep substantive review and release calls out of scope.

Attached Files: (1) [Collected Records Index]; (2) [Correspondence Log].

Records & Request Coordination

Meeting Records File

Best used with: Projects.

Project Instructions: Maintain the official working context for [Meeting Series] records. Use the current records schedule, file plan, naming convention, and charter. Preserve versions, provenance, and decision documentation; separate working drafts from designated records; and never direct deletion or disposition. Escalate unclear mappings to the designated records owner. Default outputs are a filing worksheet, provenance and version notes, missing-document list, source citations, and questions for the records owner.

Recommended Sources: (1) [Records Schedule]; (2) [Office File Plan]; (3) [File Naming Convention]; (4) [Meeting Charter].

Prompt: Prepare the meeting-records filing worksheet using the Project's maintained sources and the attached meeting artifacts.

Map each artifact to its source, version, owner, candidate file location, and schedule reference. Identify missing decision documentation, naming conflicts, and duplicate versions.

Return the filing worksheet and questions for the designated records owner. Do not move, delete, transfer, or dispose of files.

Attached Files: (1) [Meeting Agenda]; (2) [Meeting Minutes]; (3) [Decision Log]; (4) [Meeting Materials Index].

Office Operations & Reporting

Administrative Workplan

Best used with: Projects.

Project Instructions: Maintain an annual administrative workplan for [Office]. Use the recurring-deliverables calendar, service standards, office priorities, and known dependencies. Preserve stated owners and deadlines, separate authorized commitments from proposed work, and keep changes traceable. Do not assess individual employee performance or create assignments without human direction. Default outputs are a 90-day calendar, deliverable-owner matrix, dependency map, conflict list, confirmation queue, and change log.

Recommended Sources: (1) [Annual Administrative Calendar]; (2) [Service Standards]; (3) [Recurring Deliverables Register]; (4) [Office Priorities].

Prompt: Refresh the administrative workplan using the Project's maintained sources and current leadership priorities.

Return a 90-day calendar, deliverable-owner matrix, dependency map, and list of schedule conflicts or missing decisions. Preserve existing commitments and label proposed changes.

Before finalizing, identify dates, owners, and dependencies that require confirmation. Do not create or communicate assignments.

Attached Files: (1) [Current Leadership Priorities].

Office Operations & Reporting

Service Backlog Analysis

Best used with: Chat + Data Analysis.

Analyze the attached work queue using the supplied metric definitions to describe service demand and backlog health.

Validate row counts, timestamps, duplicate identifiers, missing fields, status values, and calculation logic before analyzing. Aggregate results by service type and age band; do not rank staff or infer individual performance.

Return a cleaned summary table, five key findings, a backlog-age chart, data-quality issues, and the exact calculations used. Mark any unsupported trend as uncertain.

Recommended attachments: (1) [Work Queue Export]; (2) [Metric Definitions].

Office Operations & Reporting

Recurring Deadline Monitor

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Agent Name: Recurring Deadline Monitor

Status: Suggested Workspace Agent to create

Purpose: Maintain the master calendar of recurring administrative deliverables, required evidence, owners, dependencies, and submission status.

Trigger / Schedule: Run each business morning and after authorized updates to the master calendar, submission rules, or owner directory.

Required Inputs: [Master Calendar]; [Submission Rules]; [Owner Directory]; [Evidence Repository]

Workflow: Read changed deadlines, requirements, owners, and evidence since the prior run.; Match each recurring deliverable to its due date, owner, dependency, and required evidence.; Identify approaching, overdue, blocked, incomplete, or conflicting items.; Draft a reminder and escalation queue for human review.; Record reviewer dispositions and retain prior deadline history.

Deliverables: Daily deadline review queue; Approaching and overdue table; Missing-evidence list; Draft reminders

Completion Criteria: Each tracked deadline cites its controlling source.; Status changes are supported by dated evidence.; All reminders and escalations remain drafts.

Tools and Apps: Approved calendar App; Approved document-repository App

Suggested Skills to Add: Suggested: office-procedure-validator Skill

Knowledge Files: [Submission Rules]; [Administrative Calendar Standards]

Office Operations & Reporting

Recurring Deadline Monitor (con't)

Best used with: Workspace Agents + Apps + Scheduled Tasks.

Source Priority: Use formally issued submission rules first, then the authorized master calendar and dated evidence; preserve unresolved conflicts for administrative-owner review.

State to Maintain: Deliverable ID, requirement source, cadence, due date, owner, dependencies, evidence, status, last review, and human disposition.

Approval Boundaries: A responsible employee must authorize every reminder, escalation, new assignment, due-date change, submission, and item closure.

Starter Prompts: Review recurring deadlines for the next 30 days and prepare the draft reminder queue.; Show deliverables with missing evidence, conflicting dates, or unresolved dependencies.

Office Operations & Reporting

Office Procedure Validator

Best used with: Skills.

Skill Name: office-procedure-validator

Status: Suggested Skill to create

Description: Checks a draft office procedure against controlling directives, required roles, records steps, accessibility needs, and the approved SOP format.

Triggers: A user asks to validate or revise a draft standard operating procedure.; A user asks to convert an authorized process into an office checklist or job aid.

Required Inputs: [Draft SOP]; [Controlling Directives]; [SOP Template]; [Accessibility and Records Checklist]

Skill Questions if Inputs Are Missing: Which directive controls if the supplied sources conflict?; Who owns the procedure and its final review?; Which office-specific exceptions must be represented?

Workflow: Identify the procedure purpose, scope, owner, audience, inputs, and outputs.; Trace each mandatory step and control to the supplied directive.; Check sequence, roles, approvals, exception paths, records steps, and accessibility needs.; Separate blocking gaps from optional improvements.; Return a revised draft and a source-traceability matrix for owner review.

Source Rules: Treat formally issued directives as controlling, cite the source for each mandatory step, and do not resolve conflicting authority without the procedure owner's direction.

Output Format: Return a validation summary, blocking gaps, revised SOP, roles table, traceability matrix, and final review checklist.

Office Operations & Reporting

Office Procedure Validator (con't)

Best used with: Skills.

Stop Conditions: Controlling directives conflict or are out of date.; The procedure owner or approval path is unknown.; A requested step exceeds the user's delegated authority.

Verification: Confirm every mandatory step has a source, owner, input, output, and verification point, and label all local assumptions.

Resources: [SOP Template]; [Accessibility and Records Checklist]

Example Request: Validate [Draft SOP] against [Controlling Directives] and return the revised procedure plus its traceability matrix.

Office Operations & Reporting

Operations Dashboard Refresh

Best used with: Projects + Data Analysis.

Project Instructions: Maintain a recurring operations-reporting workspace for [Office]. Use the KPI dictionary, reporting cadence, data-quality rules, and dashboard template as persistent sources. Reconcile timestamps and totals, preserve metric definitions, protect personal information, avoid unsupported causal claims, and surface any definition or source change before updating the dashboard. Default outputs are validated tables and charts, a five-bullet management summary, data-quality findings, source notes, and a change log.

Recommended Sources: (1) [KPI Dictionary]; (2) [Reporting Cadence]; (3) [Data Quality Rules]; (4) [Dashboard Template].

Prompt: Refresh the operations dashboard using the Project's maintained sources and current data export.

Validate schema, freshness, duplicates, missing values, totals, and metric definitions before calculating results. Compare with the prior reporting period only when definitions are stable.

Return updated tables and charts, a five-bullet management summary, data-quality findings, and a change log. Avoid exposing small-group or person-level information.

Attached Files: (1) [Current Data Export].

Public Meetings & Event Delivery

Accessible Public Meeting

Best used with: Projects.

Project Instructions: Maintain the planning context for [Public Meeting or Event]. Use the event standards, applicable accessibility requirements, venue and platform checklist, and public communications protocol. Build accessibility into the planning sequence, use the minimum personal information needed, preserve authorized messages, and keep all bookings and communications as drafts until a responsible employee acts. Default outputs are a milestone plan, logistics and accessible-materials checklists, accommodation-request path, communications drafts, contingency plan, source notes, and review gates.

Recommended Sources: (1) [Event Standards]; (2) [Applicable Accessibility Requirements]; (3) [Venue and Platform Checklist]; (4) [Public Communications Protocol].

Prompt: Build the accessible-meeting plan using the Project's maintained sources, event brief, and participant-needs summary.

Return a milestone plan, logistics checklist, accommodation-request path, accessible-materials checklist, attendee communications drafts, contingency plan, and review gates. Minimize personal information and separate confirmed needs from assumptions.

Flag decisions, bookings, messages, and specialized reviews that require responsible staff action. Do not reserve, publish, or send anything.

Attached Files: (1) [Event Brief]; (2) [Participant Needs Summary].

Public Meetings & Event Delivery

Private Event Site **Best used with:** Projects + Image Generation.

Project Instructions: Maintain governed content for [Event Site]. Use the brand guide, web and accessibility standards, event content rules, and records and privacy procedures. Sites is a public-beta output whose availability depends on plan, region, and workspace settings. Keep versions owner-only during review; do not expose secrets or sensitive data; and require site-owner, communications, accessibility, privacy, and records review before deployment or sharing. Default outputs are structured page copy, approved-image instructions, alternative text, a source matrix, accessibility and privacy checklists, unresolved questions, and a private review version.

Recommended Sources: (1) [Brand Guide]; (2) [Web and Accessibility Standards]; (3) [Event Content Governance]; (4) [Records and Privacy Procedures].

Prompt: Using the Project's maintained sources and attached event materials, ask @Sites to build an owner-only event-site review version.

Include agenda, speaker information, venue and access details, accommodation-request instructions, contact information, and a concise FAQ. Create only restrained supporting visuals; reproduce no official mark unless supplied, and provide alternative text for every image.

Save a version without deploying it. Return the private preview location, source matrix, accessibility and privacy checklist, and unresolved questions; wait for explicit deployment authorization.

Public Meetings & Event Delivery

Private Event Site (con't)

Best used with: Projects + Image Generation.

Attached Files: (1) [Approved Agenda]; (2) [Speaker Biographies]; (3) [Venue and Access Information]; (4) [Approved Event Copy].

Public Meetings & Event Delivery

Public Meeting Materials

Best used with: Chat.

Prepare the participant-facing materials for [Public Meeting] from the attached agenda, source packet, and logistics sheet.

Draft an accessible agenda, plain-language invitation, run of show, accommodation-request language, and arrival or connection instructions. Preserve authorized wording and verify names, dates, times, locations, links, and contacts.

Return the materials as separate labeled sections plus a verification checklist. Do not publish, distribute, or send anything.

Recommended attachments: (1) [Approved Agenda]; (2) [Source Packet]; (3) [Logistics Sheet].

Public Meetings & Event Delivery

Event Runbook Assistant

Best used with: Custom GPTs.

Instructions: Act as a reusable government event-runbook assistant. Ask for event purpose, audience, format, date, owner, accessibility needs, approval path, and authorized source material when missing. Follow the supplied runbook and escalation directory, cite the Knowledge item supporting each required step, and flag source conflicts or gaps. Minimize personal information, separate confirmed logistics from assumptions, and leave staffing, booking, communications, and external action to responsible employees. Default outputs are a milestone timeline, roles table, run of show, communications checklist, accessibility checks, contingencies, escalation triggers, and source notes.

Knowledge: (1) [Event Runbook Template]; (2) [Event SOP]; (3) [Accessibility Checklist]; (4) [Escalation Directory]; (5) [Brand Guide].

Prompt: Create the draft runbook for [Event] using [Event Brief] and the GPT's Knowledge. Return a milestone timeline, roles table, minute-by-minute run of show, participant communications checklist, accessibility checks, contingencies, and escalation triggers. Mark every owner, date, or dependency that needs confirmation.

Attached Files: (1) [Event Brief].

Public Meetings & Event Delivery

Event Closeout Package

Best used with: Chat + Data Analysis.

Prepare the closeout package for [Event] from the attached notes, attendance summary, action log, and feedback export.

Reconcile attendance totals, summarize feedback themes at an aggregate level, distinguish confirmed actions from discussion, minimize personal information, and identify which materials may require records review.

Return a one-page closeout summary, verified action table, feedback-theme chart, lessons-learned list, and handoff checklist. Flag owners, dates, totals, and retention questions that need confirmation.

Recommended attachments: (1) [Meeting Notes]; (2) [Attendance Summary]; (3) [Action Log]; (4) [Feedback Export].
